Third Party Reports

Second Parking & Traffic Survey Technical Note

The Russell & Strathmore Schools

Design & Access Statement

A.4.3

Project: **A088428 – Russell and Strathmore Schools, Richmond**
 Date: 27th February 2014
 Subject: On-Street Parking Availability in the vicinity of the Russell and Strathmore Schools

Introduction

- 1.1 This Technical Note has been prepared by WYG to accompany an existing Transport Statement (TS) which was produced to accompany the detailed planning application for the proposed expansion of the Russell Primary School at its existing Site on Petersham Road, Richmond, TW10 7AH (the 'Site'), in the London Borough of Richmond upon Thames (LBRuT) (the 'Borough'). The planning application also involves proposals to co-locate part of the nearby Strathmore SEN School to the existing Russell School Site.
- 1.2 The Technical Note provides the results of a second parking assessment, in addition to the original parking assessment undertaken in the TS, to gauge the availability of on-street parking in the vicinity of the Site several months on, and to assess any impact that the proposals will have on parking occupancy and availability in the area. Three Automatic Traffic Count (ATC) surveys were also undertaken to assess traffic patterns and vehicle speeds on roads surrounding the school Site. Both the parking and ATC surveys were undertaken by a specialist third-party survey company (Benchmark Data Collection).

Parking Conditions

- 1.3 There are some white 'zigzag' markings adjacent to the School entrances on Petersham Road, denoting no stopping at any time. There are also yellow zigzag markings located adjacent to the Meadlands Road entrance, which denote no stopping during term times, Monday to Friday between 8:00am – 9:30am and 2:30pm – 4:00pm.
- 1.4 The Site is not located within a Controlled Parking Zone (CPZ), and as such there are no 'resident-only' or other parking restrictions in force in the area. The majority of on-street space available is therefore unrestricted for on-street parking, aside from typical single and double-yellow lines restrictions.

Parking Survey

Methodology

- 1.5 The scope for the parking beat surveys has been agreed with LBRuT, and surveys were undertaken in according with the Richmond Parking Survey methodology, with agreed adjustments made for the fact that the Site is a School. For example, it had been agreed that overnight residential parking surveys were not necessary for the purposes of the parking assessment. The survey methodology is the same as that used for the original surveys, undertaken in July 2014.
- 1.6 Parking beat surveys were undertaken on Wednesday 04th and Thursday 05th February 2015, between 8:00am and 9:30am, and again between 2:00pm and 5:00pm. Additional beats were also

undertaken in the middle of the day at 11:00am and 1:00pm, to account for nursery drop offs / pickups, and also to analyse typical off-peak parking availability in the area.

- 1.7 The survey was carried out in streets within at least 200m walking distance of all entrances to the Site. The methodology requires that all streets within at 200m of the Site must be examined in length, until another junction is reached.
- 1.8 The boundary of the parking survey in relation to the Site is shown in **Figure 1**.

Figure 1 Parking Survey Boundary

- 1.9 Full printouts of the parking survey output data have been included at **Appendix A**, and are summarised in the following section. Parking plans of the study area, including individual beats, are provided at **Appendix B**.

Parking Survey Results

- 1.10 Using the parking beat survey data, it is possible to estimate the average number of parked cars that each street is able to accommodate. This is determined by adding the number of parked cars and number of spaces on each street, and calculating the average total for each street across the 21 beat surveys undertaken throughout the day.
- 1.11 The average number of parked cars that each street is able to accommodate is presented in **Table 1**.

Table 1 Parking Survey Inventory

Road Name	Average Total Number of Car Parking Spaces Available
Meadlands Drive	150
Buckingham Road	78
Buckingham Road (Cul-de-sac)	14
Clifford Road	59
Petersham Close	9
Sandpits Road	4
A307 Petersham Road	0
Sudbrook Lane	1
Meadow Close	6
River Lane	11
Average Total	332

- 1.12 **Table 1** above shows that, on average, a total of 332 spaces are available within at least 200m of the Site. The road with the highest total number of parking spaces available is Meadlands Drive, which, on average, is able to accommodate 150 parked cars.
- 1.13 It should be noted that, due to variance in car lengths, spaces between parked vehicles, driver behaviour, and ‘poor’ parking behaviours, the total number of car parking spaces provided in **Table 1** presents an average of the number of parked cars that each street can accommodate; the numbers of parked vehicles and available spaces across individual survey beats in the following sections may therefore vary from those provided in **Table 1**, due to the aforementioned factors.
- 1.14 For the purposes of providing a summary of the parking survey data, the peak morning and afternoon levels of parking occupancy have been used to provide a robust assessment of parking availability throughout the day.
- 1.15 In accordance with the relevant aspects of the Richmond Parking Survey methodology, parking beat surveys have been undertaken over two days. The data provided in the following summary therefore presents an average of the parking figures recorded over the two days.

Parking Survey Results

- 1.16 **Figure 2** shows the changes in parking occupancy throughout the day, which encompasses all streets within the study area. Parking occupancy refers to the number of parked cars in relation to the number of spaces at different times of the day.

Figure 2 Parking Occupancy

- 1.17 As shown in **Figure 2**, the peak AM and PM times for parking accumulation occurred at 08:45 and 15:30 respectively. The peak AM occupancy is 70%, whereas the peak PM occupancy is 77%. There is little variation in parking occupancy throughout the middle of the day. Occupancy between 9:30am and 2:30pm averages at 63%.
- 1.18 A summary of the parking beat survey, which provides a summary of parking occupancy on a street by street basis during AM and PM peak times, is provided in **Table 2**.

Table 2 Parking Beat Survey Results

Road Name	AM Peak (08:45)			PM Peak (15:15)		
	Parked Vehicles	Available Spaces	Peak Occupancy	Parked Vehicles	Available Spaces	Peak Occupancy
Meadlands Drive	100	53	65%	103	46	69%
Buckingham Road	53	26	67%	57	23	72%
Buckingham Road (Cul de Sac)	13	3	83%	14	1	96%
Clifford Road	46	12	79%	56	2	97%
Petersham Road	8	1	89%	8	1	89%
Sandpits Road	3	1	75%	1	3	25%
A307 Petersham Road	0	0	0%	0	0	0%
Sudbrook Lane	1	1	50%	1	1	50%
Meadow Close	5	1	83%	5	1	83%
River Lane	9	2	82%	9	2	82%
Total	236	98	71%	252	78	77%

- 1.19 As shown in **Table 2**, occupancy rates of 70% and 77% were recorded during the AM and PM peak times respectively. During the daily peak of 3:15pm, a total of 252 cars were parked within the study area, leaving 78 available spaces.
- 1.20 As noted in the previous section, the number of parked vehicles and available spaces varies across each of the individual beats, as shown in **Table 2**, due to driver behaviour, 'poor' parking behaviour, and spaces between parked vehicles. **Table 1** provides a typical average of the number of vehicles that each of the streets is able to accommodate.

Review of July 2014 Parking Survey

- 1.21 A separate parking survey had been conducted in July 2014 to provide an assessment of parking availability for the purposes of the initial Transport Statement. The initial parking assessment indicated that unrestricted on-street parking was readily available in the vicinity of the Site.
- 1.22 A comparison between the July 2014 and February 2015 survey data, in terms of parking occupancy throughout the day, is provided in **Figure 3**.

Table 3 Parking Occupancy – July 2014 and February 2015 Comparison

- 1.23 As shown in **Figure 3**, there were similar levels of parking occupancy recorded throughout the day during the July 2014 and February 2015 surveys. PM peaks for both surveys occurred at 3:15pm, while AM peaks were recorded at 8:30am in July 2014 and 8:45am in February 2015.
- 1.24 AM peak parking occupancy was 75% in July 2014 and 70% in February 2015, while the level of parking occupancy during the PM peak was 73% and 77%, for July 2014 and February 2015 respectively.

Automatic Traffic Count Survey

- 1.25 Automatic Traffic Counters (ATC) units were installed at three locations in the vicinity of the Site in order to determine the profile of traffic flows along the different links. The location of the three ATCs is shown in **Figure 2** below.

Figure 2 Locations of ATC Units

- 1.26 As shown in **Figure 2**, the three ATCS are located at or near to the existing vehicle access points to the Site, with units located either side of the existing Strathmore School access on Meadlands Drive, and another situated on Petersham Road to the south of the Russell School access.
- 1.27 The three ATCs were installed for a period of one week, commencing on Wednesday 04th February, recording traffic flows and speeds for a period of seven days thereafter.
- 1.28 Full printouts of the ATC output data have been included at **Appendix C**, and are summarised in the following sections.

Traffic Volume

- 1.29 The 24 hour average weekday two-way traffic flows for the ATCs located on Meadlands Drive and Petersham Road are provided in **Figure 3** and **Figure 4** respectively.

Figure 3 Meadlands Drive ATCs Two-Way Traffic Flows

Figure 4 Petersham Road ATC Two-Way Traffic Flows

1.30 **Figure 3** shows that average weekday two-way traffic flows recorded at the two ATCs located on Meadlands Drive were very similar, with AM and PM peaks occurring between 8:00 and 9:00am

and 3:00 and 4:00pm respectively, corresponding directly with school starting and finishing times. ATC A, located to the east of Meadlands Drive school access, recorded slightly higher levels of traffic flows.

1.31 ATC C, which was located on Petersham Road, recorded significantly higher traffic flows, as it is a main road as opposed to a predominantly residential road such as Meadlands Drive. Peak hours for traffic flows in the morning and afternoon were between 7:00 and 8:00am and 5:00 and 6:00pm respectively. These hours correspond more with typical network peaks, not school hours, suggesting that the majority of traffic on Petersham Road is not primarily associated with the schools.

Vehicle Speeds

1.32 The speed limit on Petersham Road is 30mph, although in the section adjacent to the School entrance, where the ATC was situated, is 20mph. The speed limit on Meadlands Drive is 30mph, although an area east of the Site access and the ATC is a designated 'Home Zone', with a speed limit of 15mph.

Table 4 Mean Speeds

ATC		Mean Speed (MPH)		
		AM Peak 08:00 – 09:00	PM Peak 15:00 – 16:00	Daily
Meadlands Drive (15mph speed limit)	A Eastbound	12.08	13.10	15.52
	A Westbound	10.95	13.85	15.95
	B Eastbound	8.74	8.82	10.05
	B Westbound	8.62	8.30	10.64
Petersham Road (20mph speed limit)	C Northbound	13.24	16.82	20.32
	C Southbound	16.22	17.74	20.43

1.33 As **Table 4** shows, mean speeds recorded during AM and PM peak hours are well within enforced speed limits for the respective roads. Average daily speeds recorded on ATC's A and C did exceed local speed limits, although were within 1mph of the maximum speed limits in both cases. This may be because the ATC's in both cases were located near to where the maximum speed limit on each road increases. It should also be noted that there is a small margin of error for ATC measurements.
