Subject: objections to the redevelopment even after the modifications promised

dear Sir/Madam,

I object to the plans after reading the adjustments made recently as shown at the may 2019 papers exposed in East sheen Library
the reasons are as follow:

pollution increase above the present level with hundreds of apartments and schools , at all levels in particular car motorbike traffic which increase further noise and gases in a area (Sheen Mortlake high street) detrimental to old people in particular who live in this part of Richmond.

1. In view of the present closure of Hammersmith bridge which causes a 6 days a week bumper to bumper traffic jam in high mortlake st. from Barnes Bridge to Choke corner and upper Richmond road . therefore I object to more traffic and advise that it would be reasonable , as no project has been ever cancelled but only modified , that the works for this complex project which would increase the population of car extra 500 and population of more than 1000 a day , I ask that the project should not be started until the Hammersmith bridge is reopened to car traffic .

2. In respect to the ecology and in particular global warming that all units should use electricity produced by solar panels for electrical use and central heating and appliances.

3. electric power point to recharge cars should be provided inside the redevelopment

thanks for your attention
