1.1 Maps

1.1.1 Maps 1, 2 and 3 that are required to be produced as part of the ATZ assessment are included at the **ATZ Appendix** to the rear of this report.

Map 1

No destinations have been excluded as all are considered relevant to this mixed use development.

Map 2

Three serious incidents at the Manor Road/Sheen Road/Queen's Road junction. One involved a passenger on a bus being injured with no impact being made therefore this has been discounted. The remaining two both involved a car colliding with a motorbike. There is no obvious suggestion as to how to reduce the occurrence of this kind of incident. No incidents involved pedestrians therefore it is considered that the signal controlled pedestrian crossings already in place at the junction are sufficient in that regard

Map 3

The proximity of the site to high quality public transport opportunities will provide incentive to residents, staff and visitors to travel to/from the site by non-car modes.

The permeable streets in the vicinity will provide shorter distances to the site and therefore encourage residents, staff and visitors to walk to/from the site. The green spaces surrounding the site provide attractive routes for pedestrians.

This development is encouraging a car-free lifestyle by providing a site-wide travel plan, providing limited disabled only car parking, providing cycle parking, improving pedestrian routes within the site and connections to the surrounding network.

1.2 Walking of the Key Routes

1.2.1 As required and specified within the ATZ guidance, part of the assessment requires the key walking and cycling routes to and from the site to be walked and photographed. The routes are then compared to Healthy Streets indicators 3-10 specified within the 'Guide to Healthy Streets Indicators Manual' with suggestions made to state what can be done to improve them.

1.2.2 The scope of this assessment has been agreed with TfL. The correspondence with TfL is included within the **ATZ Appendix** and the routes are shown on 'Map 2', also at the **ATZ Appendix**.

1) North on Manor Road to Manor Circus
2) South on Manor Road to Holy Trinity Primary School
3) South on Manor Road to Marshgate Primary School
4) South on Manor Road to Seymour House Medical Practice via Townshend Terrace

Route 1 - North on Manor Road to Manor Circus

This route runs north from the site's main pedestrian entrance to Manor Circus roundabout junction.

Easy to Cross	Tactile paving and dropped crossings are to be provided across the site's vehicular access to aid pedestrians. It is not expected that this will be a highly trafficked access due to the limited parking provision within the site. A refuge island with tactile paving and dropped kerbs is present on Manor Road to aid pedestrian movements to the eastern flank of the road. Although Manor Road is a relatively busy road, the refuge island reduces the distance required to cross at one time. Furthermore, the activation of the level crossing to the south results in frequent lengthy periods where vehicles are stationary and therefore providing opportunities for pedestrians to cross. At the northern point of this route, on the approach to Manor Circus, zebra crossings are provided across Manor Road with the inclusion of a refuge island. Manor Circus roundabout junction is subject of a planned TfL improvement scheme that will provide signal controlled toucan crossings.
Shade and Shelter	There are currently few opportunities for shade and shelter on this route with some trees and a bus shelter. However, this is to be improved as part of the development with trees being planted on the footway edge along the site frontage which will also provide some segregation from the road.
Places to stop and rest	This is a short route of approximately 165m. On the eastern flank of Manor Road there is a path that links to Sainsbury's, within a 'pocket park' set away from the road, that incorporates benches, with backs and armrests. On the western flank there is seating available under the protection of the bus shelter. The site will incorporate landscaped areas including seating.
Not too noisy	Although Manor Road is relatively busy it is not necessary to raise your voice to hold a conversation. The activation of the level crossing to the south results in frequent lengthy periods where vehicles are stationary and there are signs encouraging drivers to turn off their engines.
People feel safe	The assessment of personal injury accidents does not suggest that there would be cause for concern regards safety when walking or cycling on this route. The speed limit of the road is 30mph and, as previously stated, vehicles are stationary for lengthy periods. The route is street-lit and there are railings along a section on the eastern flank. The route is well-kept and there are no signs of neglect. This will be further improved by the development with buildings overlooking the footway and improvements to the footway.

Things to do and see	Sainsbury's supermarket is located opposite the site and the development will add to the street frontage with commercial units in addition to the residential units. The site will also incorporate landscaped areas and children's play areas. The central courtyard within the site will hold community events.
People feel relaxed	The route feels well maintained and clean. The carriageway and footways are well-kept and easy to navigate. Litter bins are provided at the bus shelter and within the landscaped area adjacent to Sainsbury's. As previously stated, the speed limit of the road is 30mph and vehicles are stationary for lengthy periods and drivers are encouraged to turn off their engines. As part of the development, improvements are to be made to the footway on the western flank of Manor Road and trees are to be planted on the footway edge which will also provide some segregation from the road.
Clean air	Measures are in place both city-wide and locally to decrease the need for car travel and to promote sustainable means. Drivers that are stationary due to the activation of the level crossing to the south are encouraged to turn off their engines by signs although further education of this could be promoted. The development is providing very limited car parking which will reduce vehicle usage associated with the site and therefore improve air quality.

Route 2 - South on Manor Road to Holy Trinity Primary School

This route runs south from the site's main pedestrian entrance to Holy Trinity Primary School via Manor Road and Carrington Road.

Easy to Cross	Towards the southern boundary of the site there is a refuge island with dropped kerbs on Manor Road to aid pedestrian movements to the eastern flank of the road. This would be improved with tactile paving. Although Manor Road is a relatively busy road, the refuge island reduces the distance required to cross at one time. The carriageway leading to Marylebone Gardens is raised to aid pedestrian movements. A stepped bridge is provided on the western flank of Manor Road to allow the railway line to be crossed when the level crossing is activated. The provision of ramps would improve this facility. Dropped kerbs are present at the junctions with Manor Park and Manor Gardens. Dropped kerbs are also present on Carrington Road at the junction with Kings Farm Avenue.
Shade and Shelter	There are currently few opportunities for shade and shelter on this route however there are a number of established trees along Carrington Road. Further trees are to be planted on the footway edge along the site frontage which will also provide some segregation from the road. The section of Manor Road between the level crossing and Carrington Road provides no shade or shelter however this is due to the road being fronted by houses.
Places to stop and rest	There are no formal places provided to stop and rest on this route however there are garden walls that provide informal opportunities. There are limited places seating could be provided as they would obstruct the footway and there are numerous driveways.
Not too noisy	Although Manor Road is relatively busy it is not necessary to raise your voice to hold a conversation. The activation of the level crossing results in frequent lengthy periods where vehicles are stationary and there are signs encouraging drivers to turn off their engines. Carrington Road does not provide through access, but rather serves residential dwellings and the school. Its residential nature means the road is not busy and noisy. There are 'slow' carriageway markings and school warning signs to encourage slower speeds.
People feel safe	An assessment of personal injury accidents does not suggest that there would be cause for concern regards safety when walking or cycling on this route. The speed limit of the roads is 30mph and, as previously stated, vehicles are stationary on Manor Road for lengthy periods. The route is street-lit, well-kept and there are no signs of neglect.

Things to do and see	As the route is along predominantly residential roads there are no shops etc to provide interest. However, gardens to the properties do provide variety to the route.
People feel relaxed	The route feels well maintained and clean. The carriageway and footways are well-kept and easy to navigate. A litter bin is provided on the western flank of Manor Road to the south of the level crossing. As previously stated, the speed limit of the roads is 30mph and vehicles are stationary on Manor Road for lengthy periods and drivers are encouraged to turn off their engines. Carrington Road does not provide through access, but rather serves residential dwellings and the school. Its residential nature means the road is not busy and provides more vegetation.
Clean air	Measures are in place both city-wide and locally to decrease the need for car travel and to promote sustainable means. Drivers that are stationary due to the activation of the level crossing on Manor Road are encouraged to turn off their engines by signs although further education of this could be promoted.

Route 3 - South on Manor Road to Marshgate Primary School

This route runs south from the site's main pedestrian entrance to Marshgate Primary School via Manor road and Sheen Road.

Easy to Cross	Towards the southern boundary of the site there is a refuge island with dropped kerbs on Manor Road to aid pedestrian movements to the eastern flank of the road. This would be improved with tactile paving. Although Manor Road is a relatively busy road, the refuge island reduces the distance required to cross at one time. The carriageway leading to Marylebone Gardens is raised to aid pedestrian movements. A stepped bridge is provided on the western flank of Manor Road to allow the railway line to be crossed when the level crossing is activated. The provision of ramps would improve this facility. Dropped kerbs are present at the junctions with Manor Park, Manor Gardens and Carrington Road. Signal controlled crossings are present on all arms of the Manor Road/Sheen Road/Queen's Road junction. Dropped kerbs are provided on the left turn branch of Queen's Road at this junction.
Shade and Shelter	There are currently few opportunities for shade and shelter on this route however there are established trees at the Manor Road/Sheen Road/Queen's Road junction and on the school frontage. There is also a bus shelter adjacent to the school. Further trees are to be planted on the footway edge along the site frontage which will also provide some segregation from the road. The section of Manor Road between the level crossing and Sheen Road provides no shade or shelter however this is due to the road being fronted by houses.
Places to stop and rest	A bench with back rest and arms is provided beneath an established tree at the Manor Road/Sheen Road/Queen's Road junction. Aside from this there are no formal places to rest however there are garden walls that provide informal opportunities.
Not too noisy	Although Manor Road is relatively busy it is not necessary to raise your voice to hold a conversation. The activation of the level crossing results in frequent lengthy periods where vehicles are stationary and there are signs encouraging drivers to turn off their engines. Sheen Road is also relatively busy but, again, it is not necessary to raise your voice to hold a conversation. There are school warning signs to encourage slower speeds.
People feel safe	An assessment of personal injury accidents does not suggest that there would be cause for concern regards safety when walking on this route as there are no recorded incidents involving pedestrians. However, there are a number of 'slight' incidents involving pedal cycles in the vicinity of the Manor Road/Sheen Road/Queen's Road junction. As on-road cycle lanes and advanced stop lines are already provided on two arms improvements are limited The route is street-lit, well-kept and there are no signs of neglect.

Things to do and see	As the route is along predominantly residential roads there are few shops etc to provide interest. However, gardens to the properties do provide variety to the route.
People feel relaxed	The route feels well maintained and clean. The carriageway and footways are well-kept and easy to navigate. Litter bins are provided on the western flank of Manor Road to the south of the level crossing and at the Manor Road/Sheen Road/Queen's Road junction. As previously stated, the speed limit of the roads is 30mph and vehicles are stationary on Manor Road for lengthy periods and drivers are encouraged to turn off their engines. .
Clean air	Measures are in place both city-wide and locally to decrease the need for car travel and to promote sustainable means. Drivers that are stationary due to the activation of the level crossing on Manor Road are encouraged to turn off their engines by signs although further education of this could be promoted.

Route 4 - South on Manor Road to Seymour House Medical Practice via Townshend Terrace

This route runs south from the site's main pedestrian entrance to Seymour House Medical Practice via Manor Road, Manor Gardens, Townshend Terrace and Townshend Road.

Easy to Cross	A stepped bridge is provided on the western flank of Manor Road to allow the railway line to be crossed when the level crossing is activated. The provision of ramps would improve this facility. Dropped kerbs are present at the junction with Manor Park. On Townshend Terrace dropped kerbs are present at junctions with Adelaide Road, St Mary's Grove and Townshend Road. Townshend Terrace and Townshend Road are residential roads that are quiet and therefore provide opportunities to cross.
Shade and Shelter	There are few opportunities for shade and shelter on this route however there are established trees on Manor Gardens, Townshend Terrace/St Mary's Grove junction and on Townshend Road. Further trees are to be planted on the footway edge along the site frontage which will also provide some segregation from the road. The section of Manor Road between the level crossing and Manor Gardens provides no shade or shelter however this is due to the road being fronted by houses.
Places to stop and rest	There are no formal places provided to stop and rest on this route however there are garden walls that provide informal opportunities. There are limited places seating could be provided as they would obstruct the footway and there are numerous driveways.
Not too noisy	Although Manor Road is relatively busy it is not necessary to raise your voice to hold a conversation. The activation of the level crossing results in frequent lengthy periods where vehicles are stationary and there are signs encouraging drivers to turn off their engines. The residential nature of Townshend Terrace and Townshend Road means that the roads are not busy and noisy
People feel safe	An assessment of personal injury accidents does not suggest that there would be cause for concern regards safety when walking or cycling on this route as there are no recorded incidents involving pedestrians or pedal cycles. The route is street-lit, well-kept and there are no signs of neglect.
Things to do and see	As the route is along predominantly residential roads there are no shops etc to provide interest. However, gardens to the properties do provide variety to the route.

People feel relaxed	The route feels well maintained and clean. The carriageway and footways are well-kept and easy to navigate. A litter bin is provided on the western flank of Manor Road to the south of the level crossing. As previously stated, the speed limit of the roads is 30mph and vehicles are stationary on Manor Road for lengthy periods and drivers are encouraged to turn off their engines.
Clean air	Measures are in place both city-wide and locally to decrease the need for car travel and to promote sustainable means. Drivers that are stationary due to the activation of the level crossing on Manor Road are encouraged to turn off their engines by signs although further education of this could be promoted.

1.3 Summary

1.3.1 In summary, the routes assessed generally perform well in relation to the Healthy Streets indicators by providing safe places to cross, being well-maintained, not having an accident history of concern and having public and private areas of vegetation that provide interest and variety. In addition, the development will enhance the routes along the site frontage by providing improved footways, landscaping, places to rest and overlooking buildings.

Images from Google Streetview, as well as photographs from our site visit, have been utilised in this report.

Subject: RE: 84 Manor Road Homebase, LB Richmond – Stage 3 TfL's pre-application advice - 10596/11205
Date: 31/10/2019 12:25
From: "Simpson Lucy" <LucySimpson@tfl.gov.uk>
To: "Karen Smith" <Karen.Smith@sandersonassociates.co.uk>

Hi Karen,
The updated TA should pick up on ATZs, but I am happy for the extent of this to be Manor Road up to Manor Circus and south of the level crossing, you should probably also include to the nearest primary school and doctors survey. However if the closest school/surgery is north of Manor Circus I am happy for you to exclude Manor Circus given the improvement scheme that will be implemented there in the future.

In terms of the bus standing area, we have been having a discussion regarding this and have thought of a potential option which may be workable. Could you investigate an option to provide bus standing along the site access road, parallel to the railway line, with provision for bus turning in the south west corner of the site. It may require some rejigging of the site and maybe loss of landscaping but it would allow you to completely free up the existing bus standing site?

Kind regards

Lucy

Subject: FW: 84 Manor Road Homebase, LB Richmond – Stage 3 TfL's pre-application advice - 10596/11205

Good Morning Lucy,

I would be grateful if you would confirm whether a full Active Travel Zone assessment is required as part of the updated TA for the Manor Road project.

If you recall we did include a "Healthy Streets" section in our original TA and it would be appreciated if you could confirm what exactly you want to see in the updated TA.

--
Kind Regards

Subject: 84 Manor Road Homebase, LB Richmond – Stage 3 TfL's pre-application advice

Dear Ms Smith

Following on from your recent pre-application meeting for the above site, please find Transport

for London's formal advice letter attached for your information. Should you have any questions about these comments, please contact Lucy Simpson.

Your views are important to us and in order to improve our service, we would appreciate it if you would complete and send back the enclosed feedback form ASAP.

Kind regards,

TfL Spatial Planning

APPENDIX K

TRICS Data

Calculation Reference: AUDIT-109307-181108-1127

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : C - FLATS PRIVATELY OWNED
MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	BT	BRENT	1 days
	HG	HARINGEY	1 days
	HK	HACKNEY	1 days
	IS	ISLINGTON	4 days
	KI	KINGSTON	1 days
	KN	KENSINGTON AND CHELSEA	2 days
	SK	SOUTHWARK	2 days
	WH	WANDSWORTH	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
Actual Range: 9 to 472 (units:)
Range Selected by User: 9 to 493 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/10 to 03/07/18

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	2 days
Tuesday	1 days
Wednesday	5 days
Thursday	3 days
Friday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	13 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	9
Suburban Area (PPS6 Out of Centre)	4

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Development Zone	2
Residential Zone	7
Built-Up Zone	3
No Sub Category	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	13 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	1 days
25,001 to 50,000	2 days
50,001 to 100,000	5 days
100,001 or More	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

125,001 to 250,000	1 days
250,001 to 500,000	1 days
500,001 or More	11 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	5 days
0.6 to 1.0	7 days
1.1 to 1.5	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	11 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

4 Good	1 days
5 Very Good	2 days
6a Excellent	7 days
6b (High) Excellent	3 days

This data displays the number of selected surveys with PTAL Ratings.

Total Number of dwellings: 30
Survey date: WEDNESDAY *09/05/12* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			0.445			0.489			0.934

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	9 - 472 (units:)
Survey date date range:	01/01/10 - 03/07/18
Number of weekdays (Monday-Friday):	13
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	7

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			2.184			2.381			4.565

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Calculation Reference: AUDIT-109307-181108-1106

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : D - AFFORDABLE/LOCAL AUTHORITY FLATS
MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	HG	HARINGEY	1 days
	IS	ISLINGTON	2 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter:	Number of dwellings
Actual Range:	36 to 247 (units:)
Range Selected by User:	15 to 339 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/10 to 27/06/16

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Thursday	1 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	3 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	1
Suburban Area (PPS6 Out of Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	3

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	3 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Secondary Filtering selection (Cont.):

Population within 1 mile:

50,001 to 100,000	1 days
100,001 or More	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

500,001 or More	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days
0.6 to 1.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	3 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

4 Good	1 days
5 Very Good	1 days
6a Excellent	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 HG-03-D-03 BLOCKS OF FLATS HARINGEY
COMMERCE ROAD
WOOD GREEN
WOODSIDE PARK
Suburban Area (PPS6 Out of Centre)
Residential Zone
Total Number of dwellings: 90
Survey date: FRIDAY *26/09/14* *Survey Type: MANUAL*

2 IS-03-D-03 BLOCK OF FLATS ISLINGTON
HAWES STREET
ISLINGTON

Suburban Area (PPS6 Out of Centre)
Residential Zone
Total Number of dwellings: 36
Survey date: THURSDAY *21/11/13* *Survey Type: MANUAL*

3 IS-03-D-04 BLOCKS OF FLATS ISLINGTON
LIVERPOOL ROAD
HIGHBURY

Edge of Town Centre
Residential Zone
Total Number of dwellings: 247
Survey date: MONDAY *27/06/16* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

MANUALLY DESELECTED SITES

Parameter summary

Trip rate parameter range selected:	36 - 247 (units:)
Survey date date range:	01/01/10 - 27/06/16
Number of weekdays (Monday-Friday):	3
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	1

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:			0.764			0.706			1.470

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 01 - RETAIL
Category : I - SHOPPING CENTRE - LOCAL SHOPS
MULTI-MODAL VEHICLES

Selected regions and areas:

03	SOUTH WEST		
	GS	GLOUCESTERSHIRE	1 days
05	EAST MIDLANDS		
	LE	LEICESTERSHIRE	1 days
06	WEST MIDLANDS		
	SH	SHROPSHIRE	1 days
08	NORTH WEST		
	CH	CHESHIRE	2 days
09	NORTH		
	TV	TEES VALLEY	2 days
	TW	TYNE & WEAR	1 days
11	SCOTLAND		
	EB	CITY OF EDINBURGH	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 260 to 1840 (units: sqm)
Range Selected by User: 240 to 2500 (units: sqm)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/10 to 28/10/14

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	2 days
Tuesday	2 days
Wednesday	1 days
Thursday	3 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	9 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	2
Edge of Town	2
Neighbourhood Centre (PPS6 Local Centre)	5

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	9

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

A1	8 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	1 days
15,001 to 20,000	1 days
20,001 to 25,000	2 days
25,001 to 50,000	3 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

100,001 to 125,000	3 days
125,001 to 250,000	2 days
250,001 to 500,000	4 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	3 days
1.1 to 1.5	6 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Petrol filling station:

Included in the survey count	0 days
Excluded from count or no filling station	9 days

This data displays the number of surveys within the selected set that include petrol filling station activity, and the number of surveys that do not.

Travel Plan:

No	9 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	9 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			91.303			91.213			182.516

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	260 - 1840 (units: sqm)
Survey date date range:	01/01/10 - 28/10/14
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	260 - 1840 (units: sqm)
Survey date date range:	01/01/10 - 28/10/14
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

APPENDIX M

Refined TRICs Data Output

Calculation Reference: AUDIT-109307-180802-0824

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : C - FLATS PRIVATELY OWNED
MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	BT	BRENT	1 days
	IS	ISLINGTON	1 days
	SK	SOUTHWARK	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter:	Number of dwellings
Actual Range:	29 to 472 (units:)
Range Selected by User:	25 to 493 (units:)

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/10 to 30/11/16

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Wednesday	1 days
Thursday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	3 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	2
Suburban Area (PPS6 Out of Centre)	1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Development Zone	2
Built-Up Zone	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	3 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Secondary Filtering selection (Cont.):

Population within 1 mile:

25,001 to 50,000	1 days
100,001 or More	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

500,001 or More	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days
0.6 to 1.0	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

5 Very Good	1 days
6a Excellent	1 days
6b (High) Excellent	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 BT-03-C-02 BLOCKS OF FLATS BRENT
ENGINEERS WAY
WEMBLEY

Suburban Area (PPS6 Out of Centre)
Development Zone
Total Number of dwellings: 472
Survey date: WEDNESDAY *30/11/16* *Survey Type: MANUAL*

2 IS-03-C-04 BLOCK OF FLATS ISLINGTON
CITY ROAD
ISLINGTON

Edge of Town Centre
Development Zone
Total Number of dwellings: 157
Survey date: THURSDAY *14/07/16* *Survey Type: MANUAL*

3 SK-03-C-02 BLOCK OF FLATS SOUTHWARK
LAMB WALK
BERMONDSEY

Edge of Town Centre
Built-Up Zone
Total Number of dwellings: 29
Survey date: THURSDAY *23/04/15* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

MANUALLY DESELECTED SITES

Site Ref	Reason for Deselection

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			0.159			0.169			0.328

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	29 - 472 (units:)
Survey date date range:	01/01/10 - 30/11/16
Number of weekdays (Monday-Friday):	3
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	6

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.052			0.052			0.104

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Total Rates:			0.377			0.511			0.888

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Total Rates:			0.316			0.432			0.748

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Calculation Reference: AUDIT-109307-190613-0630

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : D - AFFORDABLE/LOCAL AUTHORITY FLATS
MULTI-MODAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	IS	ISLINGTON	2 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter:	Number of dwellings
Actual Range:	36 to 247 (units:)
Range Selected by User:	15 to 339 (units:)

Parking Spaces Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/11 to 27/06/16

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Thursday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	2 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	1
Suburban Area (PPS6 Out of Centre)	1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	2 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Secondary Filtering selection (Cont.):

Population within 1 mile:

100,001 or More	2 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

500,001 or More	2 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	2 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

5 Very Good	1 days
6a Excellent	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1 IS-03-D-03 BLOCK OF FLATS ISLINGTON
HAWES STREET
ISLINGTON

Suburban Area (PPS6 Out of Centre)
Residential Zone
Total Number of dwellings: 36
Survey date: THURSDAY *21/11/13* *Survey Type: MANUAL*

2 IS-03-D-04 BLOCKS OF FLATS ISLINGTON
LIVERPOOL ROAD
HIGHBURY

Edge of Town Centre
Residential Zone
Total Number of dwellings: 247
Survey date: MONDAY *27/06/16* *Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			0.556			0.538			1.094

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	36 - 247 (units:)
Survey date date range:	01/01/11 - 27/06/16
Number of weekdays (Monday-Friday):	3
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.059			0.059			0.118

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Total Rates:			0.076			0.078			0.154

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Junction Network

Junctions

Junction	Name	Junction Type	Major road direction	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	1.76	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Manor Road (N)		Major
B	Sainsbury's		Minor
C	Manor Road (S)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.40		✓	3.25	130.0	✓	11.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane Width (Left) (m)	Lane Width (Right) (m)	Visibility to left (m)	Visibility to right (m)
B	Two lanes	2.80	2.80	32	19

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	487	0.087	0.220	0.139	0.315
1	B-C	623	0.094	0.237	-	-
1	C-B	723	0.275	0.275	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand
