17 August 2021

Dear Cllrs,

## **PRE-APPLICATION CONSULTATION – RADIO BASE STATION INSTALLATION AT RUT12290, UXBRIDGE ROAD, HIGH STREET, HAMPTON HILL, RICHMOND UPON THAMES, GREATER LONDON, TW12 1NA (NGR: E514193 N170497)**

MBNL undertakes the management and network deployment of telecommunications sites on behalf of both EE (UK) Ltd and Hutchison 3G UK Limited. The proposal is for a new Hutchison 3G UK Limited column, in order to provide the latest 4G and new 5G technologies to this area of Richmond.

As part of MBNL's continued network improvement program, there is a specific requirement for a new mast at the footway of Uxbridge Road to ensure that the latest high quality 2G, 3G and 4G service provision continues to be provided in this area of Richmond. The proposed new column will also ensure that new 5G coverage can also be provided at this location. This ensures that coverage and capacity requirements are maintained.

The proposed new mast has been sited and designed in order to provide 5G coverage and to support the existing mobile network. At present it is paramount that digital connectivity is supported and maintained throughout the country. In particular the current massive shift in user demand from city centres and places of work to residential areas and suburbs requires an improvement in coverage and capacity throughout the whole network. The current proposal therefore provides such additional capacity to the network whilst still promoting the improved 5G technology.

The proposed development is within the limits set out in Part 16 for permitted development with Prior Approval. The location enables the whole of the surrounding area to benefit from improved 5G network coverage and has been designed to be future proof, thus enabling other technologies to be deployed depending upon the demand required.

This letter therefore invites the Local Planning Authority and stakeholders, in accordance with planning policy guidance and Best Practice Commitments, to enter into pre-application discussions with regard to our preferred site option prior to a formal planning submission. Several steps in the site identification process have already been undertaken. The Local Planning Authority mast register and our records of other potential sites have been reviewed, the policies in the Development Plan have been taken into account and we have examined the inter-operator site sharing database.

Mobile telecoms networks are now ubiquitous throughout the UK. It is an expectation that an individual can connect and use their mobile phone whenever and wherever they are. With the advent of new technology, under the banner of 5G, further advances are proposed and Central Government has seen the telecoms industry, and in particular 5G, to be at the forefront of economic development.

This new column will enable 5G coverage to be provided to this area of Richmond. The Government recognises that widespread coverage of mobile connectivity is essential for

# Williams Acquisition Ltd

people and businesses. That is why the Government is committed to extending mobile geographical coverage further across the UK, with continuous mobile connectivity provided to all major roads and to being a world leader in 5G. This will allow everyone in the country to benefit from the economic advantages of widespread mobile coverage.

As well as improved mobile signal, 5G networks are also crucial to drive productivity and growth across the sectors that local areas are focusing on through their emerging Local Industrial Strategies. Enabling and planning for 5G implementation is central to achieving the Government's objective to deliver prosperity at the local level and enable all places to share in the proceeds of growth.

5G service provision will bring faster, more responsive and reliable connections than ever before. More than any previous generation of mobile networks, it has the potential to improve the way people live, work and travel, and to deliver significant benefits to the economy and industry through the ability to connect more devices to the Internet at the same time, the 'Internet of Things'. This will enable communities to manage traffic flow and control energy usage, monitor patient health remotely, and increase productivity for business and farmers, all through the real-time management of data.

The demand for mobile data in the UK is increasing rapidly, and as households and businesses become increasingly reliant on mobile connectivity, the infrastructure must be in place to ensure supply does not become a constraint on future demand.

The new column will also meet the extra demands on the network in this area as more people use internet enabled handheld devices.

The preferred MBNL option is as follows:

**RUT12290, UXBRIDGE ROAD, HIGH STREET, HAMPTON HILL, RICHMOND UPON THAMES, GREATER LONDON, TW12 1NA (NGR: E514193 N170497)**

The proposal relates to the installation of a new monopole 20m in height supporting 6 no. antennas and 2 no. 300mm dishes with a wrap around equipment cabinet at the base of the column, installation of 3 no. new equipment cabinets and ancillary development thereto. Proposed plans are enclosed for assistance.

The proposed height is essential in order to ensure the latest 4G and new 5G technologies are provided in and around this area of Richmond. These latest technologies operate at higher frequency bands than older technologies such as 2G and 3G. The higher the frequency band the greater the radio signal is naturally weakened. This means that the effects of clutter are even more significant than for the provision of older technologies. As a result, a higher column is normally required to maintain the same coverage footprint. The latest 4G technology and new 5G service provision carry higher capacity and data speeds to the user, this leads to such antennas having to be positioned at a higher height than more standard antennae and in turn a taller antenna height for 5G service provision.

Alternative site options considered and rejected are as follows:

Site	Site Name, Address, NGR, Site Type	Reason for not Choosing
GF	Junction of Nightingale Road and Broad Lane (NGR: E513423 N170591)	An installation at this location is considered to be to prominent in the streetscene and other alternatives exist which are more appropriate in order to deliver the required coverage to the target area. This site has therefore been discounted for this reason.

# Williams Acquisition Ltd

GF	Junction of Hanworth Road and Uxbridge Road (NGR: E513891 N170792)	An installation at this location is considered to be to prominent in the streetscene and other alternatives exist which are more appropriate in order to deliver the required coverage to the target area. This site has therefore been discounted for this reason.
GF	Junction of Wensleydale Road and Station Approach (NGR: E513430 N169904)	The footway at this location is too narrow to accommodate the operator's equipment. As such, it would lead to highway safety issues. A site in this location has therefore been discounted for this reason.
GF	Junction of Wensleydale Road and Gloucester Road (NGR: E513570 N170010)	An installation at this location is considered to be to prominent in the streetscene and other alternatives exist which are more appropriate in order to deliver the required coverage to the target area. This site has therefore been discounted for this reason.
GF	Junction of Broad Lane and Percy Road (NGR: E513032 N170504)	A mast at this location is not viable due to a physical lack of space in order to deliver the required level of coverage to the target area. This site has therefore been discounted for this reason.
GF	Junction of Uxbridge Road and Broad Lane (NGR: E513988 N170582)	A mast at this location is not viable due to a physical lack of space in order to deliver the required level of coverage to the target area. This site has therefore been discounted for this reason.
GF	SW on Gloucester Road (NGR: E513861 N170349)	The footway at this location is too narrow to accommodate the operator's equipment. As such, it would lead to highway safety issues. A site in this location has therefore been discounted for this reason.
GF	SW on Wensleydale Road (NGR: E513479 N170328)	The footway at this location is too narrow to accommodate the operator's equipment. As such, it would lead to highway safety issues. A site in this location has therefore been discounted for this reason.

The proposal for this MBNL site has been designed within International Commission on Non-ionising Radiation Protection (ICNIRP) public exposure guidelines. A certificate of ICNIRP compliance will be included within the planning submission.

We look forward receiving any comments you have within 14 days of this letter.

Yours faithfully

**Dianne Perry MRTPI AssocRICS**
