NICOLA KELLY GARDEN DESIGN

Existing trees including feature Willow and feature Pinus would be pruned to good health and form

Existing Rhododendron, Ferns, Helleborus and grasses would feature in the design

We would plant long-lived perennial plants to attract wildlife and create excellent biodiversity

Existing trees at the rear of the garden would be pruned to good health, then underplanted with layers of native and non-native shrubs and ground-cover plants

Existing shrubs like the Euphorbia, Choisya, Anemmanthele grasses would be planted under trees and around the lawn

Native ferns and flowering perennials would be planted around the lawn

Working with the local Wildlife Trust we would plant species of plants which would support the biodiversity

The Wildlife Pond would be a feature, we would plant aquatic plants to attract wildlife

Some areas of lawn might be mowed occasionally to create a space for the children to play during the summer holidays, The lawn would then be left to grow flowers

Herbs and edible plants would be grown in both the rear and front gardens
