## **Comments**

Type of comment: Object to the proposal

**Comment:** The development will introduce far too many cars to the area, which already cannot cope, especially with the level crossing. In any case from a climate change view the development should be car free (the seriousness of the situation is much better understood now than when the site was first considered 10 years ago.) Any cars that are permitted for special reasons should of course be electric (20% is wholly inadequate considering the life of the buildings. Petrol cars will probably no longer be on sale by the time te building finished!)

The size of the buildings is also way beyond the original brief, as is the number of units, which should be around 500.
