Comments

Type of comment: Object to the proposal

Comment: The density of the development., ratios in favor of unaffordable versus affordable housing fail to justify in the light of housing need.

The current levels of traffic, apart from the strain and danger associated with the existing infrastructure railway crossings as well as roads, already create pollution levels proving a real health risk for current residents. The level of development suggested will further increase pollution through standing traffic even less able to move. If rail services are upped to cope with increased commuter demand the crossing gates will further diminish the dissipation of traffic and associated pollution.
