Mortlake Brewery development

My husband and I continue to object to the Mortlake Brewery development proposals.

The increase in congestion and detriment to air quality are fundamentally wrong. The east/west and west/east congestion is unsustainable even at off peak times. It is inconceivable to expect this to improve with a material increase in housing and a new school being proposed. School runs always cause congestion. Why propose a school in an already over congested place?

Is there capacity for increased public transport? Where will the links be? Are there any waterborne solutions? Why are we losing a meaningful sports ground?
