PAUL A DIAMOND

Dear James

I can confirm that the proposed works at Thames Young Mariners (essentially bank protection using sheet piles and reinstatement of concrete slabs), will not impact upon any significant \*trees.

The '\*trees' on site are a mixture of self-sown willow and sycamore which have been repeatedly reduced in size over several years. This means that there are no single stem trees and the trees themselves are multi-stemmed, with stems averaging less than 75mm in diameter. They are in effect woody shrubs rather than trees.

Any reduction or removal will hardly be noticeable, consequently, neither will it have any negative impact upon the landscape of the site.
