Expert Assessment

Consultant's Overview and Guidance

From the information within this report we consider it **possible** that Ground Stability Issues may affect the property.

The BGS have identified a moderate - high potential for natural ground subsidence within the search area. This means that there is the potential for natural ground movement to occur that may be of concern. Such ground movement could cause damage to domestic or other properties. However, properties designed, constructed and maintained in compliance with modern building regulations should be unaffected by most minor subsidence. Therefore, if thinking of buying a property in the area, you should seek professional advice from a professional property surveyor and also look at the property yourself in more detail to look for any signs of existing damage. If you already own a property in the area, and you think natural ground movement may have damaged it, you should contact your insurance company for advice. You should also take professional advice before changing the ground in any way, for example, by planting or removing trees, changing drainage or carrying out building work.

You may wish to check that any structural surveys performed on the property have taken the potential for ground instability into consideration. If such factors have not been considered, you may wish to contact the local Building Regulations Officer, Planning Department and if recently constructed, the site developers. Newer developments may benefit from an NHBC guarantee or other environmental warranty which often covers structural issues.

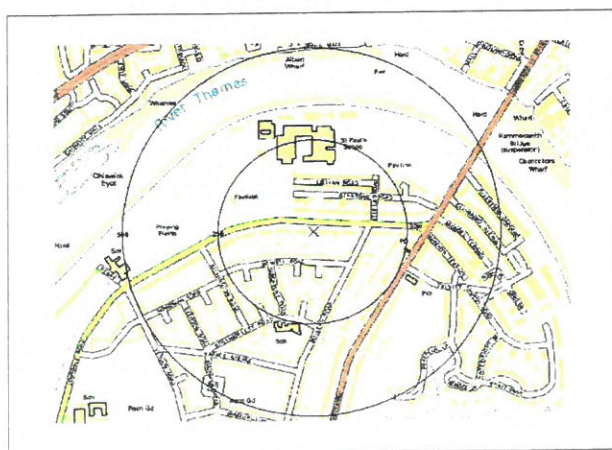

Unless suitable information is available confirming that suitable ground engineering techniques have been used at the site, you may wish to seek further more detailed assessment of stability and / or structural issues through a Chartered Surveyor or Chartered Engineer.

If you need any further assistance, please do not hesitate to contact our helpline on 01483 761 500 quoting the above report reference number.

This data set is derived from Groundsure's unique Historical Map Land Use Database

Are there any Historical Underground Working Features within 250m of the study site boundary? **No**
Risk Assessment **Passed**

Guidance: No further action required.

1.3 Current Ground Workings

This data set is derived from the BGS BRITPITS database covering active, inactive mines, quarries, oil wells, gas wells, mineral wharves, and rail deposits throughout the British Isles.

Are there any Current Ground Workings within 250m of the study site boundary?

No

Risk Assessment

Passed

Guidance: No further action required.

2. Mining and Extraction

2.1 Historical Mining

Are there any Historical Mining features within 500m of the study site boundary? No
Risk Assessment Passed

Guidance: No further action required.

2.2 Coal Mining

Are there any coal mining areas within 75m of the study site? No
Risk Assessment Passed

Guidance: The study site is not located on or in proximity to an area which is affected by surface or sub-surface coal mining. No further action is recommended.

2.3 Shallow Mining

What is the maximum hazard of subsidence relating to shallow mining within 175m* of the study site? Negligible
Risk Assessment Passed

The following shallow mining information provided by the British Geological Survey is not represented on Mapping:

Distance[m]	Direction	Details
0.0	On Site	Negligible

Guidance: Many types of mining such as ironstone or limestone extraction take place close to the surface. These types of mining can pose a subsidence risk as they sometimes cause surface collapses. Where negligible potential is indicated, this means that the rocks underlying the area are not likely to have been mined at shallow depth. However, you should still find out whether or not a Coal Authority mining search is required in the area, for example, to check for deeper mining.

2.4 Mining Cavities

Is the site located in an area of mining cavities? No
Risk Assessment Passed

Guidance: This risk rating is obtained from the mining cavities dataset, which is supplied and digitally combined by Peter Brett Associates. There are no records within 250m of the site.

2.5 Natural Cavities

Is the site located in an area of natural cavities? No
Risk Assessment Passed

Guidance: This risk rating is obtained from the mining cavities dataset, which is supplied and digitally combined by Peter Brett Associates. There are no records within 250m of the site.

2.6 Brine Extraction

Is the site located in an area of brine extraction? No

* This Includes an automated buffer of 150m.

3. Natural Ground Subsidence

3.1 Natural Ground Subsidence

What is the potential for natural ground subsidence* within the search area? Moderate - High
Guidance

This hazard rating is obtained from the amalgamation of six datasets which are supplied and digitally combined by the British Geological Survey (BGS). These datasets indicate the hazard posed by the occurrence of: Swell-Shrink Clay, Landslide, Compressible Ground, Collapsible Ground, Dissolution of Soluble Rocks and Running Sands. Many Factors may contribute to ground subsidence problems. For instance significant problems can arise in conurbations underlain by clay rich bedrock, such as over clay strata in the South East of England, or South Wales. Whilst surveyors are normally aware of local problem areas, data provided by the BGS can highlight areas where a significant potential for natural ground subsidence exists and which may need particular consideration.

Where moderate - high potential is indicated, this means that there is the potential for natural ground movement to occur that may be of concern. Such ground movement could cause damage to domestic or other properties. However, properties designed, constructed and maintained in compliance with modern building regulations should be unaffected by most minor subsidence. Therefore, if thinking of buying a property in the area, you should seek professional advice from a professional property surveyor and also look at the property yourself in more detail to look for any signs of existing damage. If you already own a property in the area, and you think natural ground movement may have damaged it, you should contact your insurance company for advice. You should also take professional advice before changing the ground in any way, for example, by planting or removing trees, changing drainage or carrying out building work.

*The term "Subsidence" refers to ground movement that could cause damage to foundations in domestic or other properties.
