

RTS and Clarendon Waste Management Strategy - Addendum

This document is an addendum to the RTS and Clarendon Waste Management Strategy document created in April 2018 and relates to the sports building to the west of the main school building.

The sports building houses a 4 court sports hall, activity studio and associated changing facilities as well as a single office to accommodate 2 people. The number of staff and students is not increased with the provision of this building and therefore the amount of waste produced should not increase. In fact, the waste generated in the building should be minimal due to the activity taking place within. The school's waste vision, as detailed in the Waste Management Strategy, is to produce as little waste as possible and recycle wherever feasible. To this end, there is likely to be very little waste to remove from the building by the cleaners on a daily basis. The waste will be removed to the main bin store shown on the plan below and will be removed from site as part of the regular waste collection.
