Type of comment: Object to the proposal

Comment: I object to this planning application to extend the garage and significantly increase the height because it will facilitate an increase the amount of cars/vans/motorbike repairs already done in the garage. The garage entrance is on to a narrow driveway which services two detached houses. The enlargement of the garage will accelerate the existing noise levels from machinery and escalate the smells caused by spraying and other activities. The disturbance caused resulting from this will exacerbating these issues will have an impact on the quality of life for all the neighbours in the vicinity. The proportions of the proposed plan would look like a commercial premises not a domestic garage. The visual impact of the increased size of the garage would look completely out of character in the narrow driveway it faces. The other garages down this driveway are all of average proportions. To have a large working garage of this nature in incongruent with the existing character and appearance of our area.

I am also concerned about the amount of hazardous materials that will be stored in the premises. There has previously been a large fire in the premises caused by welding.
