

BEAUTIFULLY DESIGNED AND ENGINEERED CAR TURNTABLES
FOR ANY DRIVEWAY OR GARAGE SPACE

BRINGING INNOVATION TO YOUR DRIVEWAY

Spin-It are designers, manufacturers, suppliers and installers of driveway turntables.

With a track record of over thirty years in the steel fabrication business, the knowledge, experience and skilled workforce, backed up with the latest machinery, all go towards reassuring you that you are in safe hands.

We manufacture vehicle turntables for both the domestic and the commercial marketplace with many satisfied customers all around the world.

We have designed the 'Spin-it' range of turntables in such a way that we can provide 'individual solutions' at prices that one would normally associate with mass production.

We are confident that if a vehicle turntable is what you need, then our 'Spin-it' range will provide you with a top quality, cost effective, reliable solution.

Our goal is 100% customer satisfaction, anything less is simply not good enough.

We look forward to doing business with you.

THE BENEFITS OF TURNTABLE OWNERSHIP

AVOID DAMAGE

Reduce the risk of scratching your pride and joy each time you use your driveway.

SAFETY

Comply with the highway code – no more reversing into heavy traffic.

COMFORT

No more stiff necks trying to reverse down your narrow driveway.

SECURITY

Park your car at 90 degrees across your drive and enjoy added security against car theft.

RECLAIM YOUR GARDEN

Win back your garden for what it was meant for.

PLANNING PERMISSION

Satisfy your local highways department when submitting planning applications.

PROFESSIONAL BENEFITS

CAR DEALERS

Show off your 'Car Of The Week' inside your showroom or outside on your forecourt.

PHOTOGRAPHERS

Move the vehicle, not your tripod. Multi-position facility available.

EXHIBITIONS

Quick, simple on-site assembly.

KEY FEATURES

KEY-FOB REMOTE CONTROL

SPIN IN BOTH DIRECTIONS

ADJUSTABLE SPEED

STOP IN ANY POSITION

SOFT START-STOP

EMERGENCY KILL SWITCH

MANUAL OPTION AVAILABLE

WARRANTY

USES STANDARD 240V SOCKET

ENGINEERING FEATURES

SEALED FOR LIFE BEARINGS

MADE IN BRITAIN IN OUR FACTORY

BESPOKE DRIVE WHEEL

AVAILABLE IN A WIDE CHOICE OF SURFACES AND COLOURS

OUR PRODUCTS

Our 'Spin-It' range of vehicle turntables are specifically designed to take away the headaches that come with having to manoeuvre vehicles in a tight space.

Starting with our 3.8 metre diameter model suitable for a small hatchback, through to our 6 metre model easily capable of turning two large family 4x4s.

Most are available in either manual or motorised models.

FROM 3.8m WIDTH

UP TO 6m WIDE

TECHNICAL OVERVIEW

The 'Spin-It' range of vehicle turntables are designed to sit in the ground in order to provide a non-obtrusive flush fit to the surrounding area. The required concrete base is only 200mm below ground level in most cases regardless of whether it is a manual or motorised installation.

QUALITY MATERIALS

The material makeup of our turntables consists of mild steel, stainless steel and aluminium, with all components (with the exception of the electric control gear) being fabricated at our factories in Staffordshire and Cheshire.

RANGE OF FINISHES

The visible top surface of the table can be whatever finish you require. Ranging from aluminium chequer plate through to block paving or resin.

HEAVYWEIGHT

The weight carrying capacities of the 'Spin-It' range are more than adequate for the size of vehicle rotated. Our popular 4.1m table comfortably spins a 3000 Kg Range Rover, whereas our 6m table will accommodate and spin two of the same with ease.

SEALED FOR LIFE BEARINGS

Our turntables rotate on nylon rollers incorporating sealed for life bearings ensuring maintenance requirements are kept to a bare minimum.

OPERATION

The standard method of operating a motorised turntable is by a spring centred key, which can rotate the turntable clockwise or anti-clockwise. Let go of the key and the turntable stops where it is. A radio controlled option is available and comes with either two key fob remotes or a larger handheld unit.

The Drive System control cabinet is weatherproof and can therefore be sited inside a garage or mounted outside in the vicinity of the turntable.

TECHNICAL OVERVIEW (CONT.)

SAFETY

Soft stop operation, a palm operated safety kill switch and much more are built in to ensure that our customers will enjoy a safe and reliable piece of equipment that will bring huge practical benefits, as well as being a sound investment.

POWER

Our motorised turntables run off a standard 13Amp plug top and use a fraction of the electricity that a kettle does. Motorised models are powered by a robust 240 volt three phase industrial motor, with power being supplied through an inverter enabling the supply to come from a domestic household circuit. The motor drives a friction wheel against the outer circumference of the table, maximising both torque and speed control.

MAINTENANCE

'Spin-It' turntables have been designed with keeping maintenance checks to a minimum. There are relatively few moving parts, however those parts that do move have either been intentionally over-engineered for the tasks they are asked to perform, or they can boast 'Sealed bearings. As with most things mechanical, we recommend an annual health check to keep the turntable performing at its best.

BUSINESS ENVIRONMENT

Where there is a commercial requirement for a turntable there often can be a need for the turntable to operate in a repetitive and consistent way. We are familiar with this type of environment and have developed various 'proximity switching' solutions to cater for your individual business needs.

Our 6 metre 'Spin-It' will comfortably handle a fully loaded Ford Transit van or equivalent, so weight need not be an issue.

SOME OF OUR INSTALLATIONS:

- Hotel concierge area
- Restaurant delivery area
- Car Washes
- Underground Parking
- Car Showrooms
- Car Dealerships
- Photo Studio
- Multi Dwellings
- Manufacturers Photo Studio
- Car Parks

MILTON KEYNES CAR WASH

Spinning up to 150 cars a day, 7 days a week.
Includes Service Level Agreements, Maintenance Contracts,
Extended Warranties and Switching Upgrades.

INSTALLATION

There are a number of options available when it comes to installation.

As with most things practical, the initial preparation and the quality of that work has a major impact on the finished product.

The preparatory ground work necessary when fitting a quality, permanent turntable is not complicated; however, it is vitally important that the groundwork is smooth and flat.

A COMPLETE SOLUTION

We offer a 'one stop shop' facility for those customers who have no desire to get involved in anything other than enjoying the benefits of turntable ownership.

We deliver the 'Spin-It' kit to site and carry out a professional Installation and commissioning service.

In the event that we are going to provide a full installation service, we will normally visit the site and carry out a survey with a view to identifying any potential problems.

It is worth noting that in the event that we have to excavate through concrete, a surcharge will be applicable.

INSTALLATION (CONT.)

The price of an average turntable solution (with the exception of the two-vehicle turntables) is just over £7,250+VAT.

This price is based on what we would class as a straightforward installation

i.e. fitting the turntable onto a pre-prepared concrete base

There will be variations in the installation price in situations where obstacles have to be overcome, (e.g. 240 volt power supply being some distance from the turntable) this is why we carry out a site survey prior to finalising a total install price.

We believe it is more beneficial to our customers that we quote these installation prices up front in order that they can acquire a budget figure, prior to any site visit taking place.

A MORE SALEABLE HOME

This property was on the market for over six months. Feedback from the agents said "vehicular access was a problem". The owner contacted us to help in providing a solution. We installed a 3.8 Meter motorised turntable and the house sold within the month.

FREQUENTLY ASKED QUESTIONS

DO I HAVE TO GET PLANNING PERMISSION TO HAVE A VEHICLE TURNTABLE?

In most cases, no. However, there are some areas where the local Planning Officers are very strict about what can be installed on your property, for example, properties in areas of outstanding natural beauty. If in doubt contact your local planning office and check it out.

MANUAL OR MOTORISED?

In 99% of cases, we supply motorised versions of our 'Spin-It' range of turntables. Manual turntables tend to be fitted where a developer merely has to tick the box that says the property being developed has complied with a requirement to have a turntable. This is the cheapest option.

From the point of view of someone who will be using the turntable on a daily basis, then the benefits of pushing a button in the warmth and comfort of your vehicle in comparison to pushing the car around in all weathers, far out way the cost difference.

HOW MUCH SPACE DO I NEED TO HAVE A TURNTABLE?

As a general rule an area of between 5.5 and 6.0 metres in diameter is sufficient space to turn a family sized vehicle through 360 degrees. The turntable will be smaller than this in the area as it only has to accommodate the footprint of the wheels of the vehicle.

CAN I FIT THE TURNTABLE MYSELF?

We do not recommend this as a first choice, but yes, you can. We have many customers who have installed their own turntable with no previous experience whatsoever. If you are practically minded, fit and healthy, then a self install can be both personally and financially rewarding.

If cost is the issue then there is an option for you, or your builder, to do part of the preparatory ground work before our installers fitting and commissioning your new turntable.

FREQUENTLY ASKED QUESTIONS

CAN I HAVE A TURNTABLE FITTED ON A SLOPE?

Yes, provided that it is a 'motorised model, it can be installed on anything up to a 1 in 12 gradient. Manual turntables must be fitted to level areas only. This is due to the pendulum force experienced if the weight of a vehicle is unevenly distributed.

HOW ARE MOTORISED MODELS POWERED?

We looked at many options of how to power our turntables before deciding on an industrial electric motor which could be supplied by a standard domestic household socket. This method is safe, reliable, cost effective, clean and importantly environmentally friendly.

CAN I STILL USE MY TURNTABLE IF THERE IS A POWER CUT?

Yes you can. Providing the turntable has been installed on a relatively level plain thus reducing the risk of a 'pendulum' force which can occur when vehicles have uneven weight distribution (heavy engine at one end).

There is an option to disconnect the drive mechanism in a simple way, enabling you to use the turntable until power is restored.

HOW BIG DOES THE HOLE IN THE GROUND HAVE TO BE?

In the case of a standard plated topped turntable the concrete pad base is just 200mm blow finished driveway level.

Our landscaped models require excavating down further by the depth of the desired landscaping finish. If you would like a copy of our ground work specification drawing, please contact us and we will be happy to email or post one out to you.

WHEN SHOPPING AROUND FOR PRICES I SEE THE 'SPIN-IT' RANGE ARE SIGNIFICANTLY CHEAPER, DOES THIS MEAN THEY ARE OF INFERIOR QUALITY?

Absolutely not, we have the distinct advantage that we manufacture in-house and in quantity and then tailor each turntable package to your individual requirements. There is no 'middle man' here, you are 'buying British' at source. Heavy-duty products, at lightweight prices.

FREQUENTLY ASKED QUESTIONS

CAN I BLEND THE TOP SURFACE OF MY TURNTABLE INTO MY SURROUNDINGS?

Yes, you can. We manufacture turntables suitable for any type of landscaping finish. Simply tell us the thickness of your preferred landscaping finish and we will make a turntable to suit.

CAN I FIT A TURNTABLE ON A GRAVEL DRIVE?

If you fit one of our turntables then certainly you can. In our design we have catered for the inevitable gravel dropping into the gap between turntable and outer skirt. With some turntables this would cause a problem where the table would jam. We have accounted for this by inverting the running gear and using gravity to clean the mechanism as it is used.

HOW RELIABLE ARE 'SPIN-IT' TURNTABLES AND WHAT MAINTENANCE IS REQUIRED?

We are that confident about the reliability of our turntables that we provide a comprehensive parts and labour warranty on all turntables that we install. Ask us for more information and we will be pleased to tell you more.

When we designed the 'Spin-It' range we placed 'reliability' and 'low maintenance' at the top of our priority list. All moving parts have 'Sealed bearings and are intentionally over engineered for the job that they do, therefore keeping maintenance to a minimum.

We have turntables in car washes, handling 150 vehicles a day, 7 days a week in a particularly harsh environment, that's reliability!

IF YOU HAVE FURTHER QUESTIONS, PLEASE GIVE US A CALL, WE ARE ALWAYS HAPPY TO HELP.
